

## **JavaScript**

### **JS**

**JavaScript** is the programming language of the web! It is used to give your websites behavior.

#### **Button Click**

Sth happens on click (e.g. fade-out, fade-in) onclick = fadeOutElements()

Function fadeOutElements()

Classes for fade-out, buttons etc. Used transitions.

#### **Constantly playing animation**

Changing titles constantly - change title to random title every 4 seconds

#### **Change if scrolled**

Past a certain point, the image changes to another one.

Less 50% - first img

More 50% - second img

#### **Change if opened**

Each animation bar is an individual object needs a delay to functionate properly (based on which animation)
